

Protel LTS 2000 Series PBX

High Performance IP PBX for up to 100 users

Protel LTS series 2000 models are full-featured IP-PBX servers that provide small businesses with a powerful telephony solution, including a wide range of advanced call handling and dialplan features. The proprietary web-based administration interface makes even the most complex call flow demands easy to program and deploy, and you can use any IP phone or softphone app that supports open SIP2 standards. Underneath it all, the Protel LTS series 2000 are built using the high-performance Intel Celeron processor chipset, running Linux Server Ubuntu 16.04 as the base operating system — the OS of choice for mission-critical telecommunications providers and cloud servers worldwide.
