

Protel LTS 3000 Series PBX

Enterprise IP PBX for up to 500 users

Protel LTS series 3000 models are full-featured, enterprise-grade IP-PBX servers that provide large organizations with a powerful telephony solution, including a wide range of advanced call handling and dialplan features. The proprietary web-based administration interface makes even the most complex call flow demands easy to program and deploy, and you can use any IP phone or softphone app that supports open SIP2 standards. Underneath it all, the Protel LTS series 3000 models are built using Intel Xeon chip server technology, running Linux Ubuntu 16.04 as the base operating system — the OS of choice for mission-critical telecommunications providers and cloud servers worldwide.
